

DMXI
digital, modular KVM-extender,
Cable length < 10km (app. 6 1/4 miles),
resolution up to 1280x1024/75Hz

Dear customer,

congratulations to purchase the DMXI KVM-extender. This product corresponds to the ultimate requisitions for quality and technics. If you still have problems with your device, please refer to your sales office.

Please read this manual before installing and operating the units. Please record the serial number, the date of purchase and your sales office in the space below. The serial number is located on the rear side of the units. These data would be important, if you ever need to repair one of the parts. Retain this Owners Manual in a safe place for future reference.

Introduction

Note: This manual describes several, different products. There may be connectors or parts described, which are not installed in your unit. See page 27/29, to find the matching interfaces for your device. A list of available devices you may find on page 38

According to the increased requirements of the computer users, regarding the screen quality, the new DMXI - Digital Modular Xtender of IHSE is an appropriate solution to fit their requirements. Depending on the type of device, you can connect monitors with a resolution of up to 1280x1024 pixels. You can use PS2 Mouse and Keyboard, SUN Keyboard/Mouse or USB Devices. The high dense packing of the electronic components allow, to mount this in a slim, tight housing, which can be placed on the table, as well as mounted at a wall as well as stacked in a 19" Housing. Bridging the distance with a Cat5 cable (used with a 10BaseT network), you can bridge at least 100m (app. 330ft). Using only 2 fibers of a fiber optical cable (i.e. FOIRL from fiber networking or Fiber To The Desk, ...) you can bridge 200m (app. 650ft) with a 62.5 micron fiber and up to 400m (app. 1310ft) with a 50 micron fiber. If you use single mode fibers/devices, you can extend the distance up to 10km (app 6 1/4 miles) without any reboosting! Using fiber devices, you do not only have the advantage of extended cable length, but your line is also absolutely unaffected by electromagnetic interferences (EMI). You have electromagnetic protection against lightnings and overvoltage. And last but not least, it is absolutely sure against any spy attack.

The external power supply has to be connected at the plug terminal on the outside of both interface boxes. It is a selfadapting AC/DC converter, using any voltage in the range between 90 and 240 Volts at 50 or 60 Hz. For industrial users there are devices with 9..28VDC available

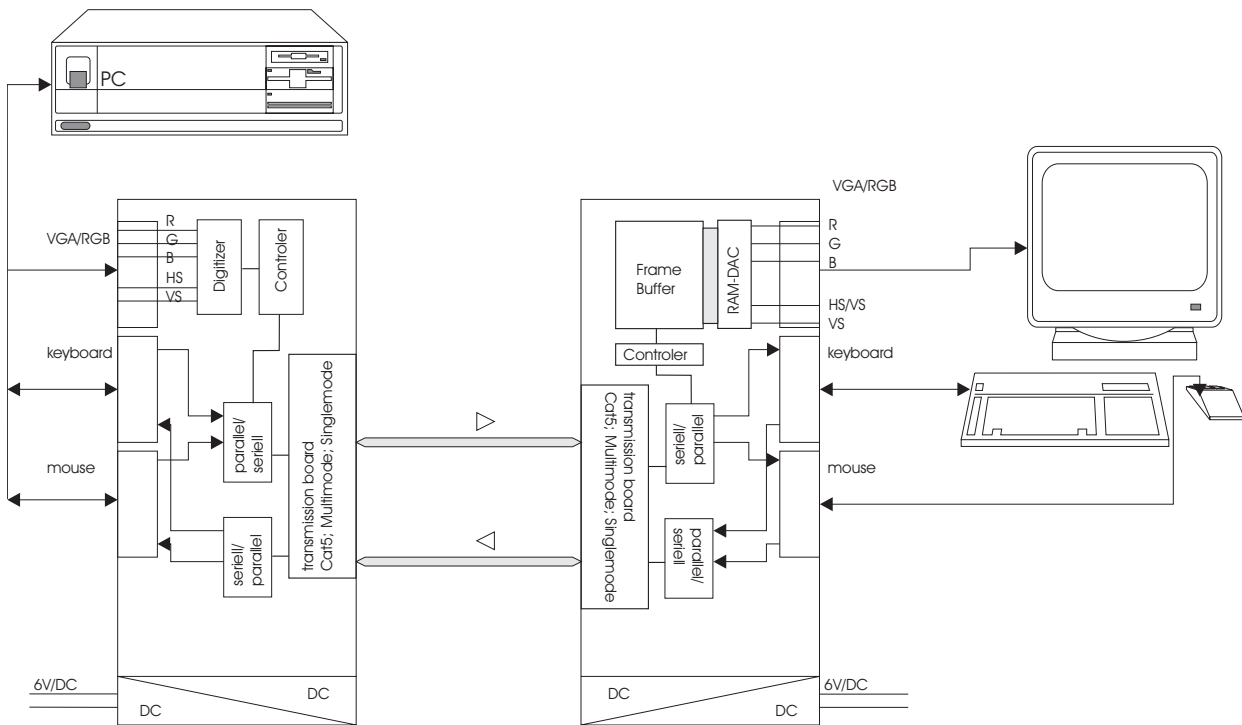

fig.: 2 - schematic installation arrangement

Specifications

Power supply

Voltage	:	p.s.u.: 90..240VAC-0,5A-47..63Hz/6VDC-2000 mA
Power required	:	local interface app. 6 W
	:	remote interface without keyboard app. 6 W
	:	remote interface with keyboard app. 7,2 W

Interface (depending on type of device)

monitor	:	VGA (res.: 1280x1024, plug&play not supported) 13Bit/24Bit Color Depth, depending on operating mode
keyboard	:	IBM PS2 (power consumption <100mA)
mouse	:	IBM PS2
keyboard/mouse	:	SUN compatible
USB	:	USB 1.1 compatible (NO CD-Writer!)

maximum length of interconnection cable (without reboost)

Cat5	:	100m (app. 330 ft)
62.5µm/50µm Multimode	:	200m@62,5µ (app. 650 ft) / 400m@50µ (app. 1310 ft)
9µm Singlemode	:	10km (app. 6 1/4 miles)

Dimensions

Weight	:	app. 1,0 kg
Length/width/height	:	app. 133 x170 x 44mm
Temperature range	:	running: app. 10°C ... 45°C storage: app. -5°C ... 55°C
Humidity	:	max. 80% - non condensing

Highlights

Automatic DPA Adjustment: Starting with rev. 1.10, all units have the 'Automatic DPA Adjustment' (see also page 35). Now the units are self adapting to the screen parameters under mostly all circumstances. Only in few cases you need to adapt manually. Naturally, the possibility to store the detected, optimal setting for the actual resolutions stays available. This is a nice feature, if you use the extender on several (switched) computers, because then, immediately after switching, you get a sharp, clear picture.

13Bit/24Bit Color Depth: Restricted by the data transfer rate, the screen data have to be transmitted in a staggered (interlaced) mode. This is visible (only if large areas on the screen are changing) in a form of vertical stripes. Reducing the color depth to 13Bit (You may see differences to 24Bit in only some few applications), the interlace can be reduced dramatically. Up to 1024x768@60Hz there is no interlace! (1:1), above only 1:2 instead of 1:4. **Attention:** This is **NOT** the setting of your VGA card! This is independent from the transmission!

optical elements (Multimode)

The used multimode transceivers are Class 1 laser products. They comply with IEC 825-1 and FD 21 CFR 1040.10 and 1040.11. To meet laser safety requirements the transceivers shall be operated within the maximum ratings.

Caution

The use of optical instruments with this product will increase eye hazards! All adjustments have been made at the factory prior to shipment of the device. No maintenance or alteration to the device is required.

Tampering with or modifying the performance of the device will result in voided product warranty.

Usage restrictions

The optical ports of the modules must be terminated with an optical connector or with a dust plug.

Note

Failure to adhere to the above restrictions could result in a modification that is considered an act of “manufacturing,” and will require, under law, recertification of the modified product with the U.S. Food and Drug Administration (ref. 21 CFR 1040.10 (i)).

Laser Data

Wavelength	850 nm
Total output power (as defined by IEC: 50mm aperture at 10cm distance)	<400µW
Total output power (as defined by FDA: 7mm aperture at 20cm distance)	<70µW
Beam divergence	12°

Required labels

FDA	IEC
Complies with 21 CFR 1040.10 and 1040.11	Class 1 Laser Product

Laser emission

Transmitter Electro-Optical Characteristics (typical)

Launched Power (Average) into multimode fiber 50µm or 62.5 µm diameter	-5 dBm (-9,5 dBm min)
Center Wavelength	850 nm

Receiver Electro-Optical Characteristics (typical)

Sensitivity (Average Power)	-20 dBm (-17dBm max)
-----------------------------	----------------------

optical elements (Singlemode)

The used singlemode transceivers are Class 1 laser products. They comply with IEC 60825-1 and FDA 21 CFR 1040.10 and 1040.11. To meet laser safety requirements the transceivers shall be operated within the absolute maximum ratings.

Caution

The use of optical instruments with this product will increase eye hazards! All adjustments have been made at the factory prior to shipment of the device. No maintenance or alteration to the device is required.

Tampering with or modifying the performance of the device will result in voided product warranty.

Usage restrictions

The optical ports of the modules must be terminated with a optical connector or with a dust plug.

Note

Failure to adhere to the above restrictions could result in a modification that is considered an act of “manufacturing,” and will require, under law, recertification of the modified product with the U.S. Food and Drug Administration (ref. 21 CFR 1040.10 (i)).

Laser Data

Wavelength	1300 nm
Total output power (as defined by IEC: 50mm aperture at 10cm distance)	<2000µW
Total output power (as defined by FDA: 7mm aperture at 20cm distance)	<180µW
Beam divergence	4°

Required labels

FDA	IEC
Complies with 21 CFR 1040.10 and 1040.11	Class 1 Laser Product

Laser emission

Transmitter Electro-Optical Characteristics (typical)

Launched Power (Average) into singlemode fiber 9 μ m diameter	-3 dBm (-11 dBm min)
Center Wavelength	1300 nm

Receiver Electro-Optical Characteristics (typical)

Sensitivity (Average Power)	-22 dBm (-20dBm max)
-----------------------------	----------------------

Connecting cables and power supply

Connecting cables

Cat5 Modules: S/UTP (Cat5) cable acc. to EIA/TIA 56A or TSB 36 or Digital STP 17-03170. Four pairs AWG 24. Pinout acc. EIA/TIA 568A (10BaseT)

Multimode Modules: Two fibers 50 μ m or 62.5 μ m. E.g. I-V(ZN)H 2G50 (Inhouse patchcable) or I-V(ZN)HH 2G62,5 (Inhouse Breakout cable) or I/AD(ZN)H 4G50 (inhouse OR outdoor Breakout cable, stress resistant) or A/DQ(ZN)B2Y 4G62,5 (outdoor cable, stress resistant with protection against animal biting) All notations acc. VDE specification

Singlemode Modules: Two fibers 9 μ m. E.g. I-V(ZN)H 2E9 (Inhouse patchcable) or I-V(ZN)HH 2E9 (Inhouse Breakout cable) or I/AD(ZN)H 4E9 (inhouse OR outdoor Breakout cable, stress resistant) or A/DQ(ZN)B2Y 4G9 (outdoor cable, stress resistant with protection against animal biting) All notations acc. VDE specification

Power Supply Socket

At the plug terminal on the outside of both interface boxes a direct current power supply with 6 V/DC has to be connected. We recommend to use our suggested p.s.u. because GND and EARTH shouldn't be connected. Please mount near to the devices ferrite rings in the DC line, to protect against electromagnetic interferences.

Plug connectors of the local interface

location of connectors at local unit PS2 type with local access:

Location of the jumpers of the local interface

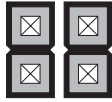

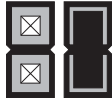

english

Control devices of the local interface

Unscrew the upper part of the casing. The jumpers are located on the board as shown in the figure above. Adjustable are:

- a) selection, whether to adjust the DPA offset automatically
- b) selection, mode 13Bit-/24Bit- Color Depth

Jumper	1 2	automatic DPA-adjustment	Color Depth Mode
		OFF	24 Bit
		OFF	13 Bit
		ON	24 Bit
		ON	13 Bit (factory setting)

Attention!: Changing the Jumper Setting takes affect after the next power-on.

Diagnostics

local unit

A only available on PS2 units with local access: when lighted: local key board/mouse is active

B (red LED)
 off: no communication error
 slow blinking: one or some few communication errors occur during the last 60 minutes

fast blinking
 (60 minutes after the last communication error occurred, the error counter is cleared automatically)

a lot of communication errors occurred during the last 60 minutes.

C (green LED)
 continuously illuminated:
 blinking:

power is on and link connection is locked
 fiber not connected or not OK

remote unit

A two LED's right up the two pushbuttons:
 If both LED's are on, the system has booted correctly.
 If only one LED's is on, it looks like you are using an unknown video-mode.

B (red LED)
 off:
 blinking:

no communication error
 communication errors occurred

C (green LED)
 continuously illuminated:
 blinking:

power is on and link connection is locked
 fiber not connected or not OK

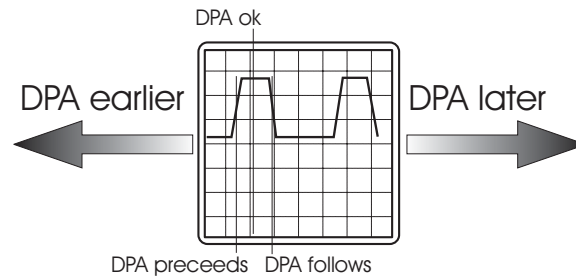

Control devices

remote unit

The only user access is, to adjust the DPA offset at the remote unit, using the two pushbuttons: Normally, the optimal DPA offset is found and adjusted by the unit automatically. Switching to another Video Mode it may take up to several seconds, to adjust to the proper setting.

If the automatic DPA adjustment brings no sufficient result, the DPA offset may be adjusted and stored manually. It is also possible, to store the automatically adjusted setting for the actual Video Mode, so you have perfect adjustment immediately after each Video Mode switching.

Digitizing the screen picture is done by reading the color value in the middle of each pixel. Depending on tolerances, the middle of a pixel may differ from PC to PC. Adjusting the DPA offset will move the point of digitizing to earlier or later, so it will be sampled in the middle of each pixel.

Pressing the left pushbutton, the position is moved to 'earlier'

Pressing the right pushbutton, the position is moved to 'later'

Pressing both, the position is stored in the internal table for the actual resolution and the actual refresh rate.

System update / onboard programming

In some special cases, it might be necessary to update the firmware of the system. Normally this is to be done in the factory. Under some circumstances it might be possible, to do this by the customer. In this case, you will receive from our support a programming cable and software. Please follow the instruction of the program and the shipped brochure.

Additional, technical information

VGA: Using VGA-signals, the color signals (R, G, B) are analog values in the range of 0...0.8Vpp. The synchronisation signals are TTL-signals with various polarities, depending on the monitor resolution. Due to the design of the units, they do not support "Plug&Play"

PS2-Keyboard: The keyboard interface is a bidirectional, synchronous serial interface. This interface is still the same as the AT-keyboard interface, only the connector is different.

PS2-Mouse: is the same interface like keyboard

Supported Video Modes

Name	Visible Pixels		Clock Rates			interlace		interlace		interlace

Access Switching (only devices with local access)

Using devices with local access, the signals of the connected graphic card is shown on the attached monitors of both, of the local interface and of the remote interface. a 'private'-function is not supported. The connected keyboards and mice can only be used mutual. Since there is a key pressed on one of the keyboards, the pressed key is sent to the PC and this station is active, means, the mouse is driven from this place. The switching can also be done by mouse access. Here you have to press both, the 'LeftMouseButton' and the 'RightMouseButton' simultaneous, this will not be sent to the PC. For switching without any PC-reaction, please use the mouse or a key like <SHIFT> oder <CTRL>/<STRG> without any additional keystroke.

Trouble-Shooting

Error

no picture

possible source of error

damage of internal power-supply: Is the LED 'C' at the local unit either illuminated or blinking and is the LED 'C' at the remote unit either illuminated or blinking ?

- **internal error:** Is at least one of LED's 'A' at the remote unit lightened
- **The fiber optical cable is not connected:** at transmitter, at receiver or at bothsides
- **The fiber optical cable is wrong adapted:** The strand, connected to the local TX (left-hand connector) must run to the remote RX (right-hand connector) and vice versa.
- **One ore more broken fibers: *Do NOT look into a fibers end directly, while it is connected to a local or remote unit! EYE HAZARD MAY OCCURE!*** Is LED 'C' at the local unit AND at the receiver unit illuminated? (NOT blinking!). Use a flashlight to check for broken fibers.
- **Did you mount a cable with a wrong fiber type?** If you use your own (not delivered by us) fiber optical cable, please ensure, that you have used 50 μ or 62.5 μ fiber at a multimode device or a 9 μ fiber at a singlemode device. Other fiber-types and poly-fibers are not supported.
- **Do you use a NON VESA resolution on your PC?:** refer to table on page 18 for supported video modes. At the remote unit - is there only one of the two LED's 'A' burning?

horizontal jittering picture **The DPA offset is misaligned:** Refer to page 35 for adjusting the DPA offset

Keyboard, mouse without function:

- **no picture:** see above (no picture) for trouble shooting
- **picture ok:** mouse model is not supported

Schedule of parts supplied

All devices come with local interface, remote interface, 2x international power supply unit and junction cable to PC

device type	transmission	parts no.
PS2 with local access	Fiber Multimode	K421-1W
PS2 with local access	Fiber Singlemode	K422-1W

Order notation of spare parts/accessories not supplied

Power supply unit	:	90..240VAC/6VDC, 2000 mA	:	260-3E
Junction cable	:	fiber cable Multimode (Break-Out-cable 2x G50/125 μ)	:	433-2M
	:	fiber cable Singlemode (Break-Out-cable 2x G9/125 μ)	:	433-2S
confectioning	:	Multimode including SC plug connectors	:	251-2C
	:	Singlemode including SC plug connectors	:	251-2S
Connecting cable(ZIP-type) (PC to local box-KVM)	:	length = 1,8m (6ft)	:	247-41
	:	length = 3,0m (10ft)	:	247-42
mounting angle (1 pair)	:	to mount by screws	:	285-2K
	:	to mount on profiles	:	286-2K
19"mounting kit	:	for 1... 3 units	:	437-1G

Special 19"- housings with matching devices are available. Please ask your dealer!

19" mounting of devices

Montageanleitung DDXi-19"-Einbausatz / Mounting instruction DDXi-19"-Rackmount Kit

Einbau eines Doppelgehäuses mit 1x Platte groß
mounting of one double space housing, using 1x plate wide

Einbau von 1x Doppelgehäuse und 1x Standardgehäuse
mit 1x Streifen schmal
mounting of one double space housing and one regular housing,
using 1x stripe narrow

Einbau eines Standardgehäuses mit 2x Platte klein
mounting of one regular housing, using 2x plate small

Einbau von 2x Standardgehäuse mit 1x Platte klein
mounting of two regular housings, using 1x plate small

Lieferumfang / List of parts delivered

- 1x Grundträger / base plate
- 2x Platte klein / plate small
- 1x Platte groß / plate wide
- 1x Streifen schmal / stripe narrow
- 14x Kreuzschlitzsenkschraube M3x5 /
Philips type countersunk screw M3x5

Einbau von 3x Standardgehäuse ohne Platten
mounting of three regular housings, using no additional plates

english

CE-declaration of conformity

This is to certify that, when installed and used according to the instructions in this manual, together with the specified cables and the maximum cable length of 3m, the Units:

K421-1W, K422-1W

are shielded against the generation of radio interferences in accordance with the application of Council Directive 89/336/EEC as well as these standards:

EN 55022: 1999 Class A

EN 55024: 1999

IEC 61000-4-2: 2001

IEC 61000-4-3: 2001

IEC 61000-4-4: 2001

EN 61000-3-2 2001

EN 61000-3-3 2002

The device was tested in a typical configuration.

Oberteuringen, December 6th, 2006

The management

A handwritten signature in black ink that reads "Peter Spiegel".

This equipment has been found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.
